## How to Use Photoshop Elements 11 for Newbie Photoshop Noobie 1. Importing and Saving Images

After launching the program, the first tab is the Library. The program imports most image formats, including RAW files, allowing you to view, edit and save images with any quality you desire. You can choose between two types of view modes: Mini, which is optimized for small images, and One, which is optimized for large images. In the program's library, you will find the items you use to work on. For example, you may have a desktop background, pictures, or tutorials. To work on a picture, select it from the Library and then click on the Image button. You will find the following

The Liquify tool allows for easy manipulation of the shapes of layers. It's great for smoothing out any wrinkles in an image, and is useful for creating that perfect logo or branding design. Adobe Photoshop allows for an endless number of great photo effects, including lighting effects, background erasure and burning, and much more. You can customize the size and color of brushes with the Brush Size and Brush Color controls. You can also create new brushes by recording strokes made in Photoshop. You can also reset the brush size or brush color to their defaults. The Brush Options control lets you set various options for each brush. These options can include brush tip size, stroke width, and brush angle. The Eraser tool is a quick way to remove objects from images, including selections, text, and other graphics. The Pen tool

---

is a variation on the Brush tool that allows for precise erasing of areas on an image. You can draw shapes, lines, and curves with the Pen. Brush Tip Shape defines the shape of the brush. Many other settings affect how the brush behaves and how it can be used. The Stroke Size controls the width of the strokes you create with the brush. You can change the brush size to different types of brushes. To change the size of the entire brush, use the Brush Size and Brush Color controls. To customize the size of only the brush, use the Brush Size and Shape controls. The Shadow Type control affects how shadows are created. The Shadow Height control determines the height of shadow areas. The Shadow Color controls the color of the shadow. The Blend Mode is an important control as well. You can use different Blend Modes on text layers to adjust the way text is overlaid. The Smudge tool is used to soften or sharpen areas of an image. It's also used to blend together two

---

adjacent areas of an image. Blend modes have various effects. Luminance, Color Burn, and Color Dodge all soften or sharpen parts of an image. Color Burn and Dodge are often used to make the image look like an old-time Kodak photo. Gradient can be useful for adding small amounts of transparency to colors, or blending colors in different portions of an image. A Gradient Blend Mode can be used to blend together two or more areas of the same color. You can use the Gradient tool to add a gradient that will flow smoothly across an image. You can also use the gradient to create a soft, dream

Stephen Colbert: President Trump Just Defended Vladimir Putin President Trump says if the U.S. does something bad, "we're going to be the laughingstock of the world," so Putin can sit there and laugh all he wants. That's because

---

the U.S. is just too good at everything! Trump claims that the U.S. is No. 1 in the world and that if you look at military spending, spending is going up. He says the United States has more coal than China. He talks about how the U.S. is "unbeatable" in everything. Colbert says this is Trump "talking about our presidency" and it sounds like he "just said the North Korea summit was a giant scheme to make a Russia channel on your TV." Someone needs to tell Donald Trump that the U.S. isn't the best country in the world. It has a flawed Constitution, intrusive government, and a debt so big, it scares even us. Since the U.S. is like a mom to the world, we should maybe talk to mom about her pushing us to take care of the world.

Q: Add Pause between animation sequences I have three animation frames i.e (1) Close, (2) Open, (3) Close. They repeat indefinitely. How do I stop the animation? I have following code but it doesn't work for me :

---

```
var myTimer:Timer = new Timer(2000); myTi  
mer.addEventListener(TimerEvent.TIMER,  
showTicker); function  
showTicker(event:TimerEvent):void {  
FadeOut.play(); FadeIn.play(); } If its not  
possible is it possible to pause between two  
consecutive animation frames (i.e pause at  
Close and Start from Open?) A: A Timer is a  
great way to go. All you need to do is set the  
repeat attribute on the timer to false and you  
should be all set. var myTimer:Timer = new  
Timer(2000, false); myTimer.addEventListener(  
TimerEvent.TIMER, showTicker); function  
showTicker(event:TimerEvent):void {  
FadeOut.play(); FadeIn.play();
